

WOLF, THE VITAL LUBRICANT

Wolf Lubricants quite literally bring engines to life, delivering the highest levels of efficiency and performance, with products that set new standards of reliability and protection.

With the exponential speed at which new and cleaner engine technologies are being developed, Wolf continues to be at the forefront of these innovations with cutting-edge products that meet the latest standards and official OEM approvals.

A STRONG COMPANY BEHIND THE BRAND

**WE PRIDE OURSELVES ON
BEING A 'PURE PLAYER' IN OUR INDUSTRY.**

We are 100% dedicated to lubricants. We've been creating next-generation products since 1955 and have accumulated more than 65 years of knowledge and expertise. As one of Europe's leading independent lubricants blenders, we are specialists, focusing on meeting the diverse needs of our customers with high-quality, technology-enhanced lubricants.

We add value with a full-service approach that includes technical advice, fast supply and on-going training and support.

TECHNOLOGY FROM RACE TO ROAD

Over the past few years Wolf's engineering minds together with its partners, have worked on and off-track to test and develop race winning formulations.

Wolf Racing Line has been tested extensively in the field and is designed to generate maximum horsepower and ultimate protection under the most demanding conditions.

The extensive testing and development of these formulations are vital in bringing the latest technologies from race to road.

RE-REFINED BASE OIL (RRBO)

At Wolf, we consider a product sustainable if its formulation includes biodegradable and/or re-refined base oils and additives. Re-refined base oil (RRBO) is a concept that has been evolving for decades. It is produced through removing various contaminants from used oil such as water, oxidation by-products, metal particles, and other impurities.

Main benefits:

- 1. CONTRIBUTION TO CIRCULAR ECONOMY:**
 Re-refined base oils are a way to make use of some of the millions of liters of used engine oil that are otherwise disposed of in the ground or through combustion each year.
- 2. LOWER OUTPUT OF CO₂ EMISSIONS:**
 According to study release by GEIR (UEIL) in 2022, Updated Life Cycle Assessment for Regeneration of Waste Oil to Base Oil, re-refined base oils have a lower carbon footprint compared to virgin base oil production processes, with a lower output of CO₂ emissions of up to 71 percent compared to virgin products.

Using RRBO's significantly reduces the lubricants' carbon footprint while delivering the level of performance expected and approved by many car manufacturers.

RACING LINE ENGINE OILS

FOUR MOTORS RACING TEAM, OUR SUSTAINABLE PARTNERSHIP

Since 2020, Wolf Oil Corporation has partnered with Four Motors, a pioneering bio-concept racing team competing at the Nürburgring, one of the most demanding racing circuits in the world, focused on reducing motorsport's CO₂ footprint.

This collaboration serves as the ultimate testing lab for Wolf Oil's sustainable formulations, allowing the company to innovate and test under extreme endurance racing conditions alongside Porsche and Four Motors.

This partnership has already produced high-performance lubricants formulated with re-refined base oils, proving that sustainability and peak performance can thrive together. Wolf continues to develop advanced lubricants compatible with sustainable fuels like E-Fuel E20, aiming for a greener future both on the track and the road.
